North Beacon Hill
Design and Character Strategies
The City of Seattle has implemented citywide and neighborhood-specific design guidelines that help designers and architects make decisions about new projects that fit within the aesthetic and character goals of the city and neighborhood. North Beacon Hill possesses Design Guidelines that emphasize the character of Beacon Hill as known to its residents and business owners. The guidelines help to reinforce existing character and protect the qualities that the neighborhood values most and would like to continue to see in their environment. These guidelines, in conjunction with the Citywide Design Guidelines, also increase overall awareness of design priorities and encourage involvement in the design review process.

This booklet contains broad categories of character elements, ordered alphabetically. Each category is associated relevant Citywide guidelines. For each element in each category, the most relevant Neighborhood Design Guidelines are highlighted to facilitate their use in design review.

Each element is accompanied with sample images from Business Improvement Areas from around Seattle. The intent is to provide examples of potential improvements that follow Beacon Hill’s guidelines. The example images are intended to be read from left to right, showing increasing levels of investment in terms of cost, time, and involvement of regulatory measures.

Within each category, elements are also presented in relative order of level of investment, with lowest first and highest last.
**Natural Elements**

**Citywide Design Guidelines**

DC3. Include open spaces that complement the design of buildings.
PL3. Encourage human activities at the street-level by connecting building entrances and edges to the sidewalk.

**Plantings**

Level of Investment:

- $$$

**Related Design Guidelines**
